

# TABLE OF CONTENT

## **CHAPTER 1: MATERIAL OPTIONS IN FIXED PROSTHODONTICS 1**

**Dr. Moez I. Khakiani, Dr. Irfan Kachwala**

Introduction	2
Fabrication techniques for various material options in fixed prosthodontics	3
Monolithic metal restorations	4
Porcelain Fused to Metal (PFM) restorations	6
Porcelain Fused to Zirconia (PFZ) restorations	9
Monolithic zirconia Restorations	11
Lithium disilicate (LiDiSi) restorations	12
Comparison between various prosthetic material options	17
Other tooth colored prosthetic material options	18
Feldspathic porcelain	18
Composite Resins	18
Choosing a prosthetic material	18
Location of the tooth	18
Length of the edentulous span	19
Compromised inter-occlusal space	19
Need for bonding	19
Parafunctional habits	20
Color of the underlying tooth	20
Size of the pulp chamber	21
Allergies	21
Competence of the laboratory technician	21
Conclusion	21

## **CHAPTER 2: OCCLUSION 22**

**Dr. Moez I. Khakiani**

Introduction	23
Understanding occlusion	23
Static Occlusal Relationship	24
Posterior teeth	24
Anterior teeth	25
Dynamic Occlusal Relationship	25
Protrusion	25

Lateral excursion	26
Group function occlusion	27
Canine guided occlusion	27
Mutually Protected Occlusion	28
Conclusion	37

## **CHAPTER 3: SHADE SELECTION AND SHADE COMMUNICATION 38**

**Dr. Mayur Davda, Dr. Moez I. Khakiani, Dr. Akshay Sharma**

Introduction	39
Understanding color	39
Attributes of color	40
Hue	40
Chroma	40
Value	40
Techniques for shade selection	40
Visual method: Shade Guides	40
VITA classical A1-D4: Conventional set-up	41
VITA classical A1-D4: Value based set-up	42
VITA Toothguide 3D-MASTER	43
VITA Linearguide 3D-MASTER	45
Natural Die material shade guide	46
General principles for shade selection	46
Standardizations prior to shade selection	46
Standardizations during shade selection	47
Drawbacks associated with shade tabs	47
Instrumental technique	48
Communication of the selected shade	48
Written	48
Photographic	49
Direct	49
Communication of true color	49
Grey card	50
Conclusion	51

**CHAPTER 4: TOOTH PREPARATION 52****Dr. Moez I. Khakiani**

Introduction 53

Desired amount of tooth reduction on the basis of prosthetic material used:

- PFM crown for an anterior tooth 53
- PFM facing crown for an anterior tooth 54
- Metal free (LiDiSi/PFZ) crown for an anterior tooth 54
- PFM crown for a posterior tooth 55
- PFM facing crown for a posterior tooth 55
- Metal free (LiDiSi/PFZ) crown for a posterior tooth 56
- Full contour metal/zirconia crown for posterior tooth 56

Finish line architecture 57

- Modified shoulder margin 57
- Deep chamfer margin 57

Margin placement with respect to the gingival crest 58

- Supra-gingival 58
- Equi-gingival 58
- Sub-gingival 58

Burs to be used for tooth preparation 59

- Crown, Bridge, PLV preparation kit by MIK Dental 59

Checking for adequacy of clearance achieved 65

- PrepGauge from MIK Dental 65

Preventing prosthesis dislodgement 67

- Retention form 67
- Resistance form 68

Management of Short Clinical Crowns 69

- Secondary resistance features 69
  - Grooves 70
  - Boxes 70
- Monolithic restorations 70
- Sub-gingival margin placement 70
- Resin cements 70
- Crown Lengthening Procedure (CLP) 70
- CAD/CAM prosthesis 70

Importance of finishing the preparation 71

Preparing a margin in difficult to access areas of the oral-cavity 71

Tooth preparation for multi-unit bridge prosthesis 72

Pontic design 73

- Ridge lap pontic 73
- Modified ridge lap pontic 74
- Sanitary pontic 74
- Ovate pontic 75

Recommended pontic designs 75

Step-by-step tooth preparation protocols

- Mandibular molar preparation for a PFM crown 76
- Central incisor preparation for a LiDiSi crown 89
- Canine preparation for a PFM crown 97
- Maxillary molar preparation for a monolithic metal/zirconia crown 102
- Lower incisor preparation for a monolithic LiDiSi/zirconia crown 105
- Maxillary premolar preparation for a PFM/PFZ facing crown 108

**CHAPTER 5: IMPRESSION 111****Dr. Moez I. Khakiani**

Introduction 112

Soft tissue management 113

Gingival tissue retraction 113

Techniques for tissue retraction 114

Mechanical technique: Retraction cords 114

- Knitted cord 114
- Braided cord 114
- Twisted cord 114

Techniques for cord retraction 115

- Single cord technique 115
- Double cord technique 116

Choosing the size of retraction cord 117

Packing the cord into the sulcus 117

Choosing a cord packer 118

Pack and roll technique 118

Duration of time the cord remains in the sulcus 119

Removal of the cord from the sulcus 119

In how much time should the impression be made? 119

Haemostasis 120

- Ferric sulphate 120
- Aluminium chloride 120
  - Pre-impregnated cords 120
  - Immersion technique 120
  - Scrub technique 121

Sulcular cleaning 121

Drawbacks of retention cords 121

Chemical/chemico-mechanical methods 121

- Expasyl from Kerr 121
- 3M retraction capsule 122
- Magic foamCord from Coltene Whaledent 122
- Traxodent from Premier Dental Products 123

Surgical methods 124	Troubleshooting in impressions 155
Lasers 124	Visible flaws 155
Electrosurgery 124	Voids at the margin or on the occlusal surface 155
Rotary curettage 124	Drag marks at the margin 156
Impression materials and techniques 125	Lack of detail around the preparation margin 156
Impression techniques using Addition Silicone 125	Tearing of the impression material upon retrieval 156
One-step technique using two different viscosities 125	Tray-tooth contact 156
Two-step technique using a foil spacer 131	Detachment of the impression from the tray 157
Two-step technique using a bleaching tray as the spacer 133	Invisible flaws 157
Two-step impression using the putty cut back technique 134	Distortion of the set impression 157
Impression techniques using polyether 137	Conclusion 158
One-step technique using a single viscosity 137	<b>CHAPTER 6: BITE REGISTRATION 159</b>
One-step technique using two different viscosities 139	<b>Dr. Moez I. Khakiani</b>
Impression techniques using Condensation Silicone 140	Introduction 160
One-step technique using two different viscosities 140	Is bite registration a must with every FPD case? 160
Two-step technique using a foil spacer 141	Material options for bite registration 162
Disinfection of impressions 142	Bite registration techniques 163
Silicone based impression materials 142	Occlusal open mouth technique 163
Polyether 142	Bite registration technique for a single unit prosthesis 164
Impression trays 143	Bite registration technique for a bridge scenario 165
Tray material 143	Technique using PVS bite registration paste 166
Metal stock tray 143	Technique using Aluwax 167
Plastic stock tray 143	Bite registration technique for bilateral preparations 168
Custom Tray 143	Lateral closed mouth technique 168
Self-cure 144	Triple tray closed mouth technique 169
Visible light-cure 144	How to ensure the patient bites into MIP correctly? 169
Retention mechanism 144	Use of a wide cheek retractor 169
Perforated tray 144	Reclined chair position 169
Rim lock tray 144	Preparatory bite record on the contra-lateral side 169
Tray adhesive 145	Use of a thin articulating foil on the contra-lateral side 170
Tray coverage 146	Conclusion 170
Full arch tray 146	<b>CHAPTER 7: PROVISIONALIZATION 171</b>
Quadrant tray 146	<b>Dr. Moez I. Khakiani</b>
Triple tray 146	Introduction 172
Triple tray impression using A-Silicone 148	Functions of a provisional restoration 172
Triple tray impression using polyether 150	Techniques for fabrication of provisional restorations 172
H & H technique 151	Laboratory fabrication of provisionals 172
Gagging and its clinical management 153	Chair-side fabrication of provisionals 173
Avoidance of trigger zones 153	
Distraction techniques 153	
Reduction of intra-oral time 154	
Allied 154	

- Freehand 173
  - Using a pre-treatment index/matrix 174
    - Powder-liquid formulation 174
    - Paste-paste formulation 175
    - Single unit provisional 175
    - Provisional for a bridge scenario 177
- Pre-Endodontic Prosthetic Preparation (PEPP) 177
- Cementation options for provisional prosthesis 178
- Retrieval of provisional prosthesis 179
- Conclusion 179

## **CHAPTER 8: COPING TRIAL 180**

**Dr. Moez I. Khakiani**

- Introduction 181
- Evaluations to be done prior to coping trial 181
  - Evaluation of the mounting 181
  - Evaluation of the die 181
  - Evaluation of the coping 182
- Evaluations to be done at the coping trial appointment 183
  - Margin fit 183
  - Stability of the coping on the tooth 184
  - Occlusal clearance 184
- Concept of reduction coping 185
- Copings for zirconia bridges 186
- Concept of anatomically reduced coping 187
- Conclusion 187

## **CHAPTER 9: BISQUE TRIAL 188**

**Dr. Moez I. Khakiani**

- Introduction 189
- Evaluation of the prosthesis on the cast 189
  - Margin fit 189
  - Proximal contacts 190
  - Occlusion 190
  - Aesthetics 190
- Patient Try-in 190
  - Margin fit 191
  - Proximal contacts 191
    - Tight contact 191
    - Open contact 192
  - Occlusion 193

- Phase 1: Static adjustments at MIP 193
  - Adjusting a single unit prosthesis 194
    - Posterior crown 194
    - Anterior crown 196
  - Adjusting a multi-unit bridge prosthesis 196
- Phase 2 : Dynamic adjustments 196
  - Posterior teeth (single unit and bridge prosthesis) 196
    - Distal drifting of maxillary 2nd molar 199
  - Anterior teeth 199
- Marking extremely smooth surfaces 199

Aesthetics 200

Conclusion 200

## **CHAPTER 10: CEMENTATION 201**

**Dr. Moez I. Khakiani**

- Introduction 202
- Pre-cementation phase 202
- Factors influencing prosthetic success at the cementation appointment 202
  - Pre-cementation preparations 202
  - Gingival health and isolation 203
  - Cement selection and cementation technique 203
    - Zinc phosphate cement 204
    - Glass ionomer cement (GIC) 204
    - Resin modified glass ionomer cement (RMGIC) 207
    - Resin cements 208
      - According to the adhesive scheme 209
        - Total-etch resin cement systems 209
      - Self-etching cement systems 209
        - Self-adhesive cement systems 209
      - According to the polymerization mechanism 210
        - Light cure resin cements 210
        - Dual cure resin cements 211
        - Chemical cure resin cements 211
- Surface treatment of prosthetic materials prior to cementation/bonding 211
  - Metal based prostheses 211
  - Lithium Disilicate restorations 212
  - Zirconia prostheses 212
- Bridge cementation 212
- Concept of trial cementation 213
- Use of CrownSeater (from MIK Dental) during posterior cementation 213
- Post cementation sensitivity and its management 214
- Conclusion 215

## **CHAPTER 11 : RETRIEVAL OF PERMANENTLY CEMENTED PROSTHESIS 216**

**Dr. Moez I. Khakiani**

Introduction 217

Target area for retrieval devices 217

Classification of crown and bridge retrieval systems 217

Conservative techniques 218

Sliding hammer type 218

Spring loaded back action hammer 218

Spring loaded automatic back action hammer 218

Bridge retrieval using loop wire technique

Safe Relax Automatic Crown and Bridge Remover

Semi-conservative techniques 219

WAMKey 219

Non-conservative techniques 222

Burs and Christensen crown remover 222

Factors to be considered when choosing a retrieval system 224

Conclusion 224

## **CHAPTER 11: PHOTOGRAPHY IN DENTISTRY 352**

**Dr. Mayur Davda**

Introduction 353

Various uses of photography in dentistry 353

Ideal criteria for dental photography equipment 353

Comparison between DSLR and mobile phone camera 353

Equipment selection 354

DSLR camera 354

Camera lens 354

Prime lens 354

Zoom lens 354

Camera flash 355

Professional photography studio lights 355

Twin flash system 355

Ring flash 355

The reverse concept in equipment selection (by DPS) 356

Important settings in dental photography 356

Standardization of settings in dental photography 357

Exposure triangle 357

International Standards Organization 358

Shutter speed 358

Aperture 359

Image evaluation 360

Histogram 360

Intra-oral accessories for dental photography 360

Benefits of ergonomics in dentistry 368

Retractors 361

Mirrors 361

Contrastors 361

Grey card 362

Rubber dam sheets 362

Calibration and protocols for extra-oral photography 362

Calibration and protocol for intra-oral photography 364

Davda's Template for Dental Photography

Conclusion 366

## **CHAPTER 12: ERGODONTICS: ERGONOMICS IN DENTISTRY 367**

**Dr. Moez I. Khakiani, Dr. Ruchi Chhabria**

Introduction 368

What is ergonomics 368

Work-related musculoskeletal disorders (WMSDs) 368

Physical signs 368

Symptoms 368

Ergodontics 368

Forceful extensions 369

Repetitive motions and prolonged activities 369

Awkward working postures 370

Localized contact stresses and segmental vibrations 371

Organizational and psychosocial work factors 371

Common clinical conditions associated with WMADs 371

Carpal Tunnel Syndrome 371

Tendonitis in various muscles 372

Trigger finger 372

Trigger points and myo-fascial pain disorder 373

Low back pain and sciatica 373

Degenerative spine disorder 373

Prevention and management of WMSDs 374

Adopting an ergonomically correct posture when seated 374

Patient's position in relation to the clinician 375

Backrest 375

Head 375

Headrest 375

Use of an ergonomic dental stool	375
Seat angle, depth and style	375
Back support	375
Seat fabric	375
Stability	375
Use of magnification	376
Through the lens loupes	376
Flip up loupes	376
Workstation design	377
Position of the dental light	377
Position of the bracket table	377
Hand instruments	377
Gloves	377
Scheduling of appointments	377
Stretching tight muscles	378
Conclusion	378
<b>CHAPTER 13: BUILDING YOUR PRACTICE</b>	<b>389</b>
<b>Dr. Sujit Pardeshi, Laila Mandani</b>	
Introduction	390
Why patients say "yes" (or "no") to treatment	390
Rational thought process	390
Emotional thought process	391
Impact of internet and social media on patient's decision making process	391
Stages of a patient's dental cycle and its correlation	392
Stage 1: Exploration	392
Create your own brand	393
Google business page	393
Blogging	393
Website	393
Search engine optimization	393
Social media marketing	394
Friends and family	394
Others	394
Stage 2: Engagement	394
Trained clinical staff	394
Comfortable seating area	395
Understand your patient	395
Gain your patient's confidence	395
Discuss, don't present	395
Assure a compassion based experience	396

Give all treatment options	396
Consultation room	396
Stage 3: Experience	396
Stage 4: Endorsement	397
Conclusion	397
<b>CHAPTER 14: MEDICO-LEGAL ASPECTS IN DENTISTRY</b>	<b>398</b>
<b>Dr. Vishwas Puranik</b>	
Introduction	399
Medico-legal case (MLC)	399
Negligence	
Consent	
Records	
Litigations in crown and bridge prosthesis	400
Conclusion	401
Informed consent: Crown and Bridge prosthetics	401
Informed consent: Removal of crowns and bridges	224
